Abstract

Package `pdflscape` adds PDF support to the environment `landscape` of package `lscape` by setting the PDF page attribute `/Rotate`.

1 Documentation

1.1 Supported drivers

- pdftex,luatex
- dvips, dvipsone, pctex32, pctexps (and other drivers that provide a non-empty `\Gin@PS@raw`)
- dvipdfm

1.2 Caveat

Depending on the configuration Ghostscript adds a guessed rotation entry by its own. This can lead to two `/Rotate` entries per page. To prevent this behaviour set the parameter `AutoRotatePages` to `/None`, eg:

```
ps2pdf -dAutoRotatePages=/None
```

1.3 Requirements

- The package `lscape`.
- The package `atbegshi` for all drivers except pdftex,luatex.

1.4 Usage

Load this package instead of or after package `lscape`:

```
\usepackage{pdflscape}
\begin{landscape}...\end{landscape}
```

2.4 Driver implementation

- **\PLS@AddRotate #1**
it expects the correct rotation number in #1 and implements the adding of the /Rotation entry in the /Page object of the current page.
- **\PLS@RemoveRotate**
it removes a previous /Rotate entry, if necessary.

2.4.1 pdfTeX

Not too nice is the global setting of `\pdfpageattr`. Perhaps this can be changed in future versions.

lualatex compat.

```

115 \ifx\pdfpageattr\undefined
116   \ifx\pdfvariable\undefined\else
117     \protected\edef\pdfpageattr{\pdfvariable pageattr}

Already the default.

```

124   \else
125     \global\pdfpageattr\expandafter{%
126       \the\pdfpageattr
127       /Rotate #1%
128     }%
129   \fi
130 }%

```

Removes a /Rotate entry.

```

132   \begingroup
133     \global\pdfpageattr\expandafter{\expandafter}%
134     \expandafter\PLS@@RemoveRotate

```

Append /Rotate free stuff to `\pdfpageattr`.

```

139   \global\pdfpageattr\expandafter{\the\pdfpageattr#1}%

Ready, because the detected /Rotate is part of the end marker: `/Rotate\@nil`

2.5 Driver independent stuff

The landscape environment is extended by adding the correct `/Rotate` entries.

```
186 \g@addto@macro{\landscape}{\PLS@Rotate{90}}
187 \g@addto@macro{\endlandscape}{\PLS@Rotate{0}}
```

`\PLS@Rotate` Main macro, that sets the `/Rotate` entry.

Argument: any TeX number or nothing, that means zero.
Driver independent.

```
188 \def\PLS@Rotate#1{%
189   \begingroup
1. Check and validate the argument.
190   \PLS@CheckAngle{#1}%
191   \expandafter\endgroup
2. Remove previous \Rotate entry.
192   \expandafter\PLS@RemoveRotate
3. Add /Rotate entry.
193   \expandafter\PLS@AddRotate\expandafter{\the\count@}%
194 }
```

\PLS@CheckAngle Validates the rotation angle.
The result is stored in the count register \count@.
Driver independent.

```
195 \def\PLS@CheckAngle#1{%

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

`CTAN:macros/latex/contrib/oberdiek/pdfescape.dtx` The source file.

`CTAN:macros/latex/contrib/oberdiek/pdfescape.pdf` Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

`CTAN:install/macros/latex/contrib/oberdiek.tds.zip`

TDS refers to the standard “A Directory Structure for TeX Files” (`CTAN:tds/tds.pdf`). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdflatfi.pl` that should be installed in such a way that it can be called as `pdflatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdflatfi.pl
cp scripts/oberdiek/pdflatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain TeX:

```
tex pdfescape.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>pdfescape.sty</code>	→ <code>tex/latex/oberdiek/pdfescape.sty</code>
<code>pdfescape.pdf</code>	→ <code>doc/latex/oberdiek/pdfescape.pdf</code>
<code>test/pdfescape-test1.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test1.tex</code>
<code>test/pdfescape-test2.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test2.tex</code>
<code>test/pdfescape-test3.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test3.tex</code>
<code>test/pdfescape-test4.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test4.tex</code>
<code>test/pdfescape-test5.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test5.tex</code>
<code>test/pdfescape-test6.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test6.tex</code>
<code>test/pdfescape-test6.txt</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test6.txt</code>
<code>test/ExtractRotate.java</code>	→ <code>doc/latex/oberdiek/test/ExtractRotate.java</code>
<code>pdfescape.dtx</code>	→ <code>source/latex/oberdiek/pdfescape.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your TeX distribution (teTeX, mikTeX, ...) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is pdftk, e.g. unpack the file into the current directory:

```
pdftk pdflscape.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain TeX: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pdflscape.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX.

```
pdflatex pdflscape.dtx
makeindex -s gind.ist pdflscape.idx
pdflatex pdflscape.dtx
makeindex -s gind.ist pdflscape.idx
pdflatex pdflscape.dtx
```
