

# The `refcount` package

Heiko Oberdiek\*

<heiko.oberdiek at gmail.com>

2016/05/16 v3.5

## Abstract

References are not numbers, however they often store numerical data such as section or page numbers. `\ref` or `\pageref` cannot be used for counter assignments or calculations because they are not expandable, generate warnings, or can even be links. The package provides expandable macros to extract the data from references. Packages `hyperref`, `nameref`, `titleref`, and `babel` are supported.

# 1 Usage

## 1.1 Setting counters

The following commands are similar to L<sup>A</sup>T<sub>E</sub>X's `\setcounter` and `\addtocounter`, but they extract the number value from a reference:

```
\setcounterref, \addtocounterref
\setcounterpageref, \addtocounterpageref
```

They take two arguments:

```
\...counter...ref {<LATEX counter>} {<reference>}
```

An undefined references produces the usual LaTeX warning and its value is assumed to be zero. Example:

```
\newcounter{ctrA}
\newcounter{ctrB}
\refstepcounter{ctrA}\label{ref:A}
\setcounterref{ctrB}{ref:A}
\addtocounterpageref{ctrB}{ref:A}
```

## 1.2 Expandable commands

These commands that can be used in expandible contexts (inside calculations, `\edef`, `\csname`, `\write`, ...):

```
\getrefnumber, \getpagerefnumber
```

They take one argument, the reference:

```
\get...refnumber {<reference>}
```

The default for undefined references can be changed with macro `\setrefcountdefault`, for example this package calls:

```
\setrefcountdefault{0}
```

Since version 2.0 of this package there is a new command:

```
\getrefbykeydefault {<reference>} {<key>} {<default>}
```

This generalized version allows the extraction of further properties of a reference than the two standard ones. Thus the following properties are supported, if they are available:

Key	Description	Package
<i>&lt;empty&gt;</i>	same as <code>\ref</code>	<code>L<sup>A</sup>T<sub>E</sub>X</code>
<code>page</code>	same as <code>\pageref</code>	<code>L<sup>A</sup>T<sub>E</sub>X</code>
<code>title</code>	section and caption titles	<code>titleref</code>
<code>name</code>	section and caption titles	<code>nameref</code>
<code>anchor</code>	anchor name	<code>hyperref</code>
<code>url</code>	url/file	<code>hyperref/xr</code>

Since version 3.2 the expandable macros described before in this section are expandable in exact two expansion steps.

### 1.3 Undefined references

Because warnings and assignments cannot be used in expandible contexts, undefined references do not produce a warning, their values are assumed to be zero. Example:

```
\label{ref:here}% somewhere
\refused{ref:here}% see below
\ifodd\getpagerefnnumber{ref:here}%
  reference is on an odd page
\else
  reference is on an even page
\fi
```

In case of undefined references the user usually want's to be informed. Also `LATEX` prints a warning at the end of the `LATEX` run. To notify `LATEX` and get a normal warning, just use

```
\refused {<reference>}
```

outside the expanding context. Example, see above.

#### 1.3.1 Check for undefined references

In version 3.2 macros were added, that test, whether references are defined.

<pre>\IfRefUndefinedExpandable {&lt;refname&gt;} {&lt;then&gt;} {&lt;else&gt;} \IfRefUndefinedBabel {&lt;refname&gt;} {&lt;then&gt;} {&lt;else&gt;}</pre>
---

If the reference is not available and therefore undefined, then argument *<then>* is executed, otherwise argument *<else>* is called. Macro `\IfRefUndefinedExpandable` is expandable, but *<refname>* must not contain babel shorthand characters. Macro `\IfRefUndefinedBabel` supports shorthand characters of babel, but it is not expandable.

### 1.4 Notes

- The method of extracting the number in this package also works in cases, where the reference cannot be used directly, because a package such as `hyperref` has added extra stuff (hyper link), so that the reference cannot be used as number any more.
- If the reference does not contain a number, assignments to a counter will fail of course.

## 2 Implementation

```
1 (*package)
Reload check, especially if the package is not used with LATEX.
2 \begingroup\catcode61\catcode48\catcode32=10\relax%
3 \catcode13=5 % ^M
4 \endlinechar=13 %
5 \catcode35=6 % #
6 \catcode39=12 % '
7 \catcode44=12 % ,
8 \catcode45=12 % -
9 \catcode46=12 % .
10 \catcode58=12 % :
11 \catcode64=11 % @
12 \catcode123=1 % {
13 \catcode125=2 % }
14 \expandafter\let\expandafter\x\csname ver@refcount.sty\endcsname
15 \ifx\x\relax % plain-TeX, first loading
16 \else
17 \def\empty{}%

232 }

```

## 2.5 Setting counters by reference data

### 2.5.1 Generic setting

`\rc@set` Generic command for `\{set,addto\}counter{page,}ref:`

```

#1: \setcounter, \addtocounter
#2: \ltx@car (for \ref), \ltx@cartwo (for \pageref)
#3: LATEX counter
#4: reference

```

```

233 \def\rc@set#1#2#3#4{%
234   \begingroup
235   \csname @safe@activetrue\endcsname
236   \refused{#4}%
237   \expandafter\rc@set\csname r@#4\endcsname{#1}{#2}{#3}%
238   \endgroup
239 }

```

```

\rc@@set   #1: \r@<...>
           #2: \setcounter, \addtocounter
           #3: \ltx@car (for \ref), \ltx@carsecond (for \pageref)
           #4: LATEX counter

```

```

240 \def\rc@@set#1#2#3#4{%
241   \ifx#1\relax
242     #2{#4}{\rc@default}%
243   \else
244     #2{#4}{%
245       \expandafter#3#1\rc@default\rc@default\@nil
246     }%
247   \fi
248 }

```

## 2.5.2 User commands

`\setcounterref`

```
249 \rc@RobustDefZero\setcounterref{%  
250   \rc@set\setcounter\ltx@car  
251 }
```

`\addtocounterref`

```
252 \rc@RobustDefZero\addtocounterref{%  
253   \rc@set\addtocounter\ltx@car  
254 }
```

`\setcounterpageref`

```
255 \rc@RobustDefZero\setcounterpageref{%  
256   \rc@set\setcounter\ltx@carsecond  
257 }
```

`\addtocounterpageref`

```
258 \rc@RobustDefZero\addtocounterpageref{%  
259   \rc@set\addtocounter\ltx@carsecond  
260 }
```

## 2.6 Extracting references

`\getrefnumber`

```
261 \rc@newcommand*\getrefnumber}[1]{%  
262   \romannumeral  
263   \ltx@ifundefined{r@#1}{%  
264     \expandafter\ltx@zero  
265     \rc@default  
266   }{%  
267     \expandafter\expandafter\expandafter\rc@extract@  
268     \expandafter\expandafter\expandafter!%  
269     \csname r@#1\expandafter\endcsname  
270     \expandafter{\rc@default}\@nil  
271   }%  
272 }
```

`\getpagerefnumber`

```
273 \rc@newcommand*\getpagerefnumber}[1]{%  
274   \romannumeral  
275   \ltx@ifundefined{r@#1}{%  
276     \expandafter\ltx@zero  
277     \rc@default  
278   }{%  
279     \expandafter\expandafter\expandafter\rc@extract@page  
280     \expandafter\expandafter\expandafter!%  
281     \csname r@#1\expandafter\expandafter\expandafter\endcsname  
282     \expandafter\expandafter\expandafter{%  
283       \expandafter\rc@default  
284     \expandafter}\expandafter{\rc@default}\@nil  
285   }%  
286 }
```

`\getrefbykeydefault`

```
287 \rc@newcommand*\getrefbykeydefault}[2]{%

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/refcount.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/refcount.pdf](#) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

*TDS* refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

### 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

---

<sup>1</sup><http://ctan.org/pkg/refcount>

**Script installation.** Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain  $\TeX$ :

```
tex refcount.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
refcount.sty          → tex/latex/oberdiek/refcount.sty
refcount.pdf          → doc/latex/oberdiek/refcount.pdf
test/refcount-test1.tex → doc/latex/oberdiek/test/refcount-test1.tex
test/refcount-test2.tex → doc/latex/oberdiek/test/refcount-test2.tex
test/refcount-test3.tex → doc/latex/oberdiek/test/refcount-test3.tex
test/refcount-test4.tex → doc/latex/oberdiek/test/refcount-test4.tex
test/refcount-test5.tex → doc/latex/oberdiek/test/refcount-test5.tex
refcount.dtx          → source/latex/oberdiek/refcount.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 4.4 Refresh file name databases

If your  $\TeX$  distribution (`te $\TeX$` , `mik $\TeX$` , ...) relies on file name databases, you must refresh these. For example, `te $\TeX$`  users run `texhash` or `mktextlsr`.

### 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk refcount.pdf unpack_files output .
```

**Unpacking with  $\LaTeX$ .** The `.dtx` chooses its action depending on the format:

**plain  $\TeX$ :** Run `docstrip` and extract the files.

**$\LaTeX$ :** Generate the documentation.

If you insist on using  $\LaTeX$  for `docstrip` (really, `docstrip` does not need  $\LaTeX$ ), then inform the `autodetect` routine about your intention:

```
latex \let\install=y\input{refcount.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex refcount.dtx
makeindex -s gind.ist refcount.idx
pdflatex refcount.dtx
makeindex -s gind.ist refcount.idx
pdflatex refcount.dtx
```

## 5 Catalogue

The following XML file can be used as source for the [T<sub>E</sub>X Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `refcount.xml`.

```
740 (*catalogue)
741 <?xml version='1.0' encoding='us-ascii'?>
742 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
743 <entry datestamp='$Date$' modifier='$Author$' id='refcount'>
744   <name>refcount</name>
745   <caption>Counter operations with label references.</caption>
746   <authorref id='auth:oberdiek' />
747   <copyright owner='Heiko Oberdiek' year='1998,2000,2006,2008,2010,2011' />
748   <license type='lppl1.3' />
749   <version number='3.5' />
750   <description>
751     Provides commands <tt>\setcounterref</tt> and
752     <tt>\addtocounterref</tt> which use the section (or whatever)
753     number from the reference as the value to put into the counter, as
754     in:
755
756     <pre>
757     ...\label{sec:foo}
758     ...
759     \setcounterref{foonum}{sec:foo}
760     </pre>
761     Commands <tt>\setcounterpageref</tt> and
762     <tt>\addtocounterpageref</tt> do the corresponding thing with the
763     page reference of the label.
764   <p/>
765   No <tt>.ins</tt> file is distributed; process the
766   <tt>.dtx</tt> with plain TeX to create one.
767   <p/>
768   The package is part of the <xref refid='oberdiek'>oberdiek</xref>
769   bundle.
770 </description>
771 <documentation details='Package documentation'

775 <texlive location='oberdiek' />
776 <install path='/macros/latex/contrib/oberdiek/oberdiek.tds.zip' />
```

777 </entry>  
778 </catalogue>

## 6 History

### [1998/04/08 v1.0]

- First public release, written as answer in the newsgroup `comp.text.tex`:  
“Re: Adding a `\ref` to a counter?”<sup>2</sup>

### [2000/09/07 v2.0]

- Documentation added.
- LPPL 1.2
- Package rewritten, new commands added.

### [2006/02/20 v3.0]

- Support for `hyperref` and `nameref` improved.
- Support for `titleref` and `babel`'s shorthands added.
- New: `\refused`, `\getrefbykeydefault`

### [2008/08/11 v3.1]

- Code is not changed.
- URLs updated.

### [2010/12/01 v3.2]

- `\IfRefUndefinedExpandable` and `\IfRefUndefinedBabel` added.
- `\getrefnumber`, `\getpagerefnumber`, `\getrefbykeydefault` are expandable in exact two expansion steps.
- Non-expandable macros are made robust.
- Test files added.

### [2011/06/22 v3.3]

- Bug fix: `\rc@refused` is undefined for `\setcounterpageref` and similar macros. (Bug found by Marc van Dongen.)

### [2011/10/16 v3.4]

- Bug fix: `\setcounterpageref` and `\addtocounterpageref` fixed. (Bug found by Staz.)
- Macros `\(setaddto)counter(page)ref` are made robust.

---

<sup>2</sup>Url: <http://groups.google.com/group/comp.text.tex/msg/c3f2a135ef5ee528>

[2016/05/16 v3.5]

- Documentation updates.

## 7 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
